DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the a axis" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim 1 recites the limitation "the c axis" in 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6-16 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Saegusa US 5846505.

Saegusa teaches a method of making perovskite barium titanate (Example 1). One of the most important characteristics of Saegusa is that iodine gas and/or hydrogen iodide gas are/is selected as an atmosphere gas in which the raw material powder is calcined (Column 6 Lines 5-10). Chlorine or hydrogen chloride may also be used as the atmospheric gas (Column 6 Lines 14-19).

The calcinations temperature depends on the kind of intended double metal made in the process, the concentration of iodine or hydrogen iodide in the atmosphere gas, or a calcinations time, and is not limited. Preferably from 500 degrees C to 1500 degrees C, more preferably 600 degrees C to 1400 degrees C, in particular 800 degrees C to 1200 degrees C (Column 7 Lines 40-45).

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saegusa US 5846505.

Saegusa des not expressly state all the limitations of claim 1, however where the claimed and prior art product(s) are identical or substantially identical, or are produced by identical or substantially identical process(es) the burden of proof is on applicant to establish that the prior art product(s) do not necessarily or inherently possess the characteristics of the instantly claimed product(s), see In re Best, 195 USPQ 430.

Application/Control Number: 10/554,054

Art Unit: 1754

Claims 6-16 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Uchida US 2002/0064499.

Uchida teaches a method of making perovskite barium titanate (Paragraph 24).

Uchida teaches that a hydrogen halide may be used as an atmospheric gas (Paragraph 20), during a calcination step. Calcination occurs at 500 degrees C to 1000 degrees C (Claim 7).

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchida US 2002/0064499.

Uchida des not expressly state all the limitations of claim 1, however where the claimed and prior art product(s) are identical or substantially identical, or are produced by identical or substantially identical process(es) the burden of proof is on applicant to establish that the prior art product(s) do not necessarily or inherently possess the characteristics of the instantly claimed product(s), see In re Best, 195 USPQ 430.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Fiorito whose telephone number is (571)272-7426. The examiner can normally be reached on 9am - 6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on (571) 272-1358. The fax phone
